

Sterling Holidays Ten-Agent Report

A concise assessment of the complete SEO/AEO agent suite using sterlingholidays.com and the Sterling Kodai - Lake priority page.

7.5/10	10/10	126
Overall quality	Agents completed	Tests passed

Executive assessment

All ten agents completed persisted live runs. The suite is effective as an analyst's first-pass workbench with human review. It is not ready for unsupervised client publishing because several scores are heuristic, crawl coverage is partial, and some recommendations still require editorial judgement.

Most important Sterling findings

- Confirmed 404 at [/resorts-hotels/corbett](#).
- Malformed JSON-LD on three sampled pages.
- Site-wide navigation dominates the sampled link graph: 182 observed edges, but only 15 contextual edges.
- The Kodai - Lake page has 14 images with missing alt attributes and does not use the exact evaluation phrase.

Evaluation boundary

The keyword **resorts in Kodaikanal**, audience, and campaign goal are evaluation fixtures. They are not presented as Sterling's approved strategy. Business facts came only from Sterling's public page; prices, live availability, ratings, hours, and coordinates were withheld.

AGENT SCORECARD

How each agent performed

Agent	Result	Rating	Run
SEO/AEO Audit	20 pages; score 68; 9 grouped findings	8.5/10	f4bc4176
AI Visibility	10 pages; readiness 93; 3 findings	7.5/10	13edfdc3
Internal Linking	15 pages; 4 retained opportunities	7.5/10	fba5007c
SERP & Competitor	8 results; 2 of 5 pages inspected	7.5/10	284e3706
Content Brief	Score 77; handoff correctly withheld	6.5/10	4ddc2ebe
Keyword Clustering	15 seeds; 4 clusters; no volume data	7.0/10	722541c4
Metadata	4 titles; 3 descriptions; selection needs review	7.0/10	2308470f
Schema Markup	Valid LodgingBusiness draft	8.0/10	c1ab6697
Local SEO	One grounded needs-review page	7.0/10	57147714
Content Optimizer	2,320 words; score 64; 11/13 checks	7.5/10	2358ef1a

Quality judgement

The strongest outputs were evidence-backed technical findings, conservative schema generation, and transparent crawl limitations. The weakest point was the Content Brief: it completed but failed its own handoff validation. Metadata, clustering, local copy, and contextual links are usable drafts that still need campaign-owner or editor approval.

Pipeline handoff

The Content Optimizer retained both the saved SERP and Content Brief run IDs. The wider chain remains partial because the Brief, Metadata, and Schema agents cannot yet consume upstream runs directly.

ACTUAL OUTPUTS

What each agent returned

1. SEO/AEO Audit

Score 68 | 20 pages | 1 critical, 3 important, 5 grouped minor findings

- Confirmed output: HTTP 404 at /resorts-hotels/corbett.
- Confirmed output: malformed JSON-LD on the homepage, resorts listing, and Kodai - Lake page.
- Review output: missing/generic image alternatives, multiple H1, and long metadata.

Assessment: Strong evidence and prioritization; browser-only checks still need manual confirmation.

2. AI Visibility

Overall 93 | Discoverability 100 | Machine readability 84 | Entity clarity 93 | Citability 93

- Important: malformed JSON-LD affected two pages in this ten-page sample.
- Opportunities: six pages lacked clear Q&A; sections; four did not repeat the supplied entity name in key copy.
- Declared robots rules allowed the tested AI crawler tokens at audit time.

Assessment: Useful readiness scorecard; it does not measure actual mentions or citations in answer engines.

3. Internal Linking

182 observed edges | 15 contextual edges | 4 retained opportunities

- Top opportunity: Karwar to Goa Varca using anchors such as **beach resorts in Goa**.
- Suggested placement: after the Arabian Sea or Konkan coastline reference in the Karwar page.
- Three medium-confidence links connect related resort destinations and require editorial review.

Assessment: The strongest placement is actionable; the remaining destination relationships need human judgement.

4. SERP & Competitor

Mixed intent | 8 organic results | 2 of 5 selected pages inspected | Median 733 words

- Leading results included The Tamara Kodai, Tripadvisor, MakeMyTrip, Agoda, and Booking.com.
- No People Also Ask or related-search entries were returned in this timestamped sample.
- Three competitor pages were unavailable to the bounded crawler and were reported as missing coverage.

Assessment: Good SERP evidence capture with honest partial coverage; the competitor content sample is small.

ACTUAL OUTPUTS

Planning and search copy

5. Content Brief

Quality 77 | Ready for handoff: No

- Suggested title: **Sterling Kodai - Lake: The Premier Resort Experience Near Kodai Lake.**
- Outline: why choose the resort; accommodation and dining; leisure and wellness amenities.
- Blocking validation: target topic was not carried clearly into outline headings; title-keyword alignment was weak.

Assessment: The refusal state worked correctly, but the brief must be regenerated before writer handoff.

6. Keyword Clustering

15 seeds | 4 clusters | 2 pillars | No search-volume data

- Best Resorts in Kodaikanal - primary: **best resorts in Kodaikanal.**
- Kodaikanal Travel Guide - primary: **things to do in Kodaikanal.**
- Hotels Near Kodaikanal Lake and Sterling Hotels Kodaikanal formed two supporting clusters.

Assessment: The architecture is coherent, but the proposed Sterling page may duplicate the existing URL.

7. Metadata

4 title options | 3 description options | Recommended title score 90.4

- Recommended title: **Book Sterling Kodai Lake: Indoor & Outdoor Activities.**
- Recommended description: **Book Sterling Kodai - Lake, a 6.5-acre resort in Kodaikanal with 102 rooms. Enjoy lake views, spa, bar, and activities. Direct booking.**
- The description is 135 characters and was flagged as shorter than the preferred range.

Assessment: Grounded options are usable, but the selected title misses the exact evaluation keyword and needs editor review.

ACTUAL OUTPUTS

Structured and page outputs

8. Schema Markup

Valid JSON-LD draft | @type: LodgingBusiness | Blocking issues: 0

- Entity: **Sterling Kodai - Lake**; phone: **+91 7969792009**; address: 44 Gymkhana Road, Kodaikanal.
- Included supplied description and amenities such as restaurant, spa, free Wi-Fi, fitness centre, and pet friendly.
- Recommended properties still missing: **url** and **geo**.

Assessment: Correct resort type and grounded properties; final rendered page still needs schema validation.

9. Local SEO

Status: Needs review | 1 location page | 5 missing-fact warnings | 5 review tasks

- Title: **Sterling Kodai - Lake Accommodation in Kodaikanal**.
- Draft includes property facts, two service sections, five FAQs, contact CTA, and LodgingBusiness markup.
- Missing facts stayed explicit: opening hours, pricing, live availability, ratings, and coordinates.

Assessment: Grounded and safely labelled; generic slug, long description, placeholders, and prose expansions need editing.

10. Content Optimizer

Score 64 | 2,320 words | 11 of 13 checks assessed | 9 actions

- Good: one H1, seven H2s, readable sentences, metadata, links, content depth, and structured data.
- High action: review 14 images missing alt attributes.
- Medium actions: add the target phrase naturally and review missing Kodai Lake, room-layout, and SERP/brief themes.

Assessment: A solid review queue after the extraction fix; exact-match topic prompts should not be applied mechanically.

RECOMMENDATION

What to fix next

Defects found and corrected during testing

Content extraction

A one-word shell produced a false optimizer result. The extractor now falls back to substantial body content. The live rerun increased observed copy from 1 to 2,320 words.

Resort schema

LodgingBusiness support was added to the Schema Generator. The corrected live run emitted the appropriate resort type using supplied facts.

Local page schema

Physical accommodation businesses now emit LodgingBusiness instead of generic LocalBusiness.

Priority Sterling work queue

1. Restore or redirect the confirmed Corbett 404.
2. Repair malformed JSON-LD and validate the rendered pages.
3. Review missing image alternatives, separating informative and decorative images.
4. Confirm the target keyword and intent before changing copy or metadata.
5. Regenerate the Content Brief until it passes handoff validation.
6. Review contextual links and keyword clusters for relevance and cannibalization.
7. Validate the final LodgingBusiness markup after integration.

Decision: Use the suite for research, prioritization, and draft generation with human approval. One live site is not the mentor's full benchmark; that still requires 50-100 distinctly reviewed pages across 5-10 sites, issue-level accuracy labels, and rendered desktop/mobile review.
